

Strong and safe power transmission for two decades

DST Dauermagnet-SystemTechnik GmbH, headquartered in the German city of Neuenrade, has been specialising on development and production of permanent magnetic couplings for the past 20 years. Agitator motors and innovative canisters like the patented BOROHCAN®, supplement the offer of the company which has been associated to the Echterhage Holding since 1998.

Various applications

With the large range of products, DST provides environmentally friendly and cost-effective solutions. In cases where highly toxic or aggressive media is being used, DST products enable a leakage-free transmission and thus meet the highest safety requirements. Due to their special safety feature, DST magnetic couplings can be used in various areas: besides the chemical, pharmaceutical and food industry, DST products are applied in biotechnology, in industrial furnaces, in water management, in compressors, in measurement and dosing technology, in hydraulics or in petrochemistry.

Find solutions together with the customer

To be able to offer a broad service and product portfolio, the customised consulting has highest priority for DST. Own branch offices in the USA, China, India, Italia, the United Kingdom and France, as well as further sales and distribution partners in all relevant industrial countries ensure a worldwide network allowing DST to act close to the customer.
