

## SUCO Integrated mechanical pressure switches

SUCO have launched the NC/NO hex 24 and change over switches hex 27 with integrated connectors. These products offer high protection class (to IP67 or IP6K9K), and in addition the mechanical pressure switches can be individually set to a specific switching point. The adjustment range is from 0.3 up to 200 bar, with overpressure safety up to 600 bar.

The integrated connectors allow easy plug and play electrical connection. The time saving connectors reduce labour cost and also provide error-free contact connection. The switches are compact and rugged designed and due to their high IP rating of IP65, IP67 and IP6K9K suited well for industrial environments like construction and agricultural machinery or commercial vehicles. SUCO offers a large selection of electric plug-in types for quick attachment and reliable connection; the corresponding mating plugs are also available as accessories.

More information on SUCO mechanical pressure switches can be found in the product catalogue.
