

System solutions for Fluid Technology

BEDA Flow Systems Pvt. Ltd. is part of the German Echterhage Holding, one of the leading specialists for custom fluid technology solutions. This expansive group unites five medium-sized manufacturing companies that are located at the three main offices in Neuenrade, Gevelsberg and Varese (Italy), and which develop highly advanced products and systems for fluid, drive, measuring and process technology.

The companies of the Echterhage Holding are producing flow meters, hydraulic components, permanent magnetic couplings and pump systems that are used primarily in process plants, hydraulic systems as well as in industrial process management and control. Due to their highly precise mechanisms and evaluation electronics, they are also used in dosing systems and in areas of application requiring monitoring and measuring equipment. The comprehensiveness of its portfolio is apparent in the wide spectrum of industry sectors where products from the Echterhage Group are used. The group has clients from the chemical, plastics and pharmaceutical industries, food production, and from the aerospace, automobile and shipbuilding industries.

Integrated system solutions are the focus of product development for our clients. Hence, we work closely with the client starting from the first enquiry to the development and design, assembly and commissioning of the product. Close cooperation within the Echterhage Group is equally important to us. This leads to effects of synergy that are essential for solving complex tasks. By offering the development of complete systems at a single source, we are able to achieve optimal performance for our clients.

With our very own design department, we are able to implement a continuous optimisation process which among others also results in new patents, licenses and certifications. This also means the introduction of new products, systems and services which are realised in individual development and in cooperation with key clients.
